Education

Jaypee Institute of Information Technology, B.Tech in Computer Science and Engineering

May 2017 – June 2021

Experience

Senior Software Engineer, Brevo – Noida, IN

Mar 2026 – Present

- Developing AI-powered features behind feature flags for rapid experimentation – shipping fast, monitoring real user behaviour, and rolling back when needed.
- Building organisation-level Claude skills to optimise token usage and improve context quality; authored skills for semantic commit messages and automated PR reviews (design system compliance, performance, best practices, code smell detection).
- Expanding scope into QA automation scripting and backend development, broadening full-stack contribution.

Software Engineer, Brevo – Noida, IN

Feb 2023 – Mar 2026

- Owned end-to-end delivery of Brevo's registration flow (tens of thousands of users) with DB failover handling, multi-language support, fraud prevention (reCAPTCHA v3, eHawk, Sift Science), and input sanitization; deployed a critical hotfix during a live DDoS attack, earning the *Core Value Champion Award*.
- Improved Lighthouse score from **40% to 90%** by implementing code splitting, lazy loading, and image optimization; reduced bundle size by replacing Axios with a lightweight custom apiFetch utility.
- Built global reusable components (Banner, DatePicker, Toggle, Select), drove DS architecture decisions (props design, factory hooks, state patterns), and authored Storybook docs; led MFE migration via Webpack Module Federation, eliminating hard reloads and redundant fetches.
- Integrated FullStory, Elastic RUM, and GTM for session replay, performance monitoring, and A/B testing; owned production incident response and collaborated with the pricing team on feature-flagged rollouts.
- Championed React 18 upgrade and DS component revamps across the org; built shared utilities (apiFetch); mentored junior engineers and led PR reviews on performance, accessibility, and code quality.

Associate Software Engineer, Brevo – Noida, IN

Jun 2021 – Feb 2023

- Grew test coverage from near-zero to **80%+** by introducing snapshot testing patterns, mock Redux store, and standardized Jest timezone across CI environments.
- Improved team DX by adding Husky/lint-staged pre-commit hooks, ESLint and Prettier enforcement, reducing review friction and maintaining consistent code quality.
- Identified and resolved security vulnerabilities including XSS risks via input sanitization and HTML injection prevention; contributed to frontend performance optimisation across legacy pages.

Technical Skills

Languages: JavaScript, HTML, CSS

Frameworks & Libraries: React, Redux, Webpack, Jest, React Testing Library

Developer Tools: Git, GitHub Actions, Storybook, VS Code, Claude Code, Copilot, Monorepo

Observability & Analytics: Elastic RUM, FullStory

Projects

DatePicker – Org-wide Design System

naos.brevo.design

- Built an accessible DatePicker (single & range) with keyboard/ARIA support, custom triggers and localization; proposed and implemented a factory hook pattern that cut repetitive setup by ~60%, adopted across all product teams.

Optimize Translation Script

- JS script to detect and remove redundant/unused translation keys across all frontend repos, reducing bundle size and eliminating repetitive manual cleanup org-wide.

Cross-Repo Automated Upgrade CLI

- Shell script to auto-verify, install, and raise PRs across consuming repos; extending with GitHub Actions for release-triggered rollouts with auto-generated PR descriptions.
